PROFILE

B.Tech Computer Science (Data Science) student passionate about building agentic systems using Python, FastAPI, and LLMs. Built scalable healthcare and fintech AI applications through academic, internship, and hackathon projects. Ranked in the top 0.2% globally in the 2026 Virtual PromptWars.

EDUCATION

Aug 2023 – July 2027

B.Tech in Computer Science Engineering (Data Science)

CGPA: **8.53/10.0**

Meerut Institute of Engineering and Technology, Meerut (Affiliated by AKTU)

Coursework: DBMS, Object-Oriented Programming, Computer Networks

TECHNICAL SKILLS

Languages :- Python, SQL, C

Libraries/Frameworks :- React, FastAPI, NumPy, Pandas, Streamlit

AI/Machine Learning :- Prompt Engineering, ChatGPT, Gemini API, Groq, XGBoost, Random Forest, Llama-3

Tools :- Git, GitHub, VS Code, Docker, Agentic IDE (Google Antigravity), Render

Cloud & Platforms :- Google Cloud

PROJECTS

HospisynAI [\[GitHub\]](#) || [\[Live Demo\]](#)

- Architected a multi-agent AI ecosystem using FastAPI and Groq-powered Llama-3.3-70B to transform raw clinical notes into structured prescriptions and patient handouts in **11 languages**, achieving average response latency below 1.5 seconds.
- Developed a hybrid AI Billing Auditor that combines deterministic validation rules with LLM-based reasoning to identify potential clinical and billing inconsistencies before invoice generation, intended to improve billing accuracy while reducing manual verification effort by 76%.
- Containerized and deployed a decoupled React, FastAPI, and Neon PostgreSQL stack using Docker, Vercel, and Render, implementing SQLAlchemy connection pooling, role-based access control (**RBAC**), audit logging, and optimized API performance.

FinSight [\[GitHub\]](#) || [\[Live Demo\]](#)

- Built an AI-driven analytics platform that calculates Revenue at Risk (RAR) by analyzing UPI and banking transaction patterns using RFM behavioral modeling.
- Designed interactive 'What-if' simulation dashboards using React and Groq LLMs that enabled product managers to quantify intervention ROI, generating testable business hypotheses from UPI/banking data and directly supporting data-driven decision-making.

VoteWise AI [\[GitHub\]](#) || [\[Live Demo\]](#)

- Built a responsive FastAPI election app using Gemini 2.0 Flash, Google Embeddings, and SQLite3 in-memory caching to deliver low-latency, multilingual civic guidance.
- Designed an offline-capable PWA integrated with the Google Maps API to visualize polling booths and voter density heatmaps with WCAG 2.1 AA accessibility.
- Integrated Google One-Tap OAuth and configured a GitHub Actions CI/CD pipeline with Pytest to automate testing and secure user onboarding.

VIRTUAL INTERNSHIP EXPERIENCE

AI Intern – Infosys Springboard 7.0

July 2026 – Present

- Selected for a highly competitive virtual internship program under the 7.0 cohort, focusing on enterprise-level AI applications to design and develop CommAI (an AI-powered multilingual mass communication platform).
- Integrated Groq API (Llama 3.3/3.1) to build an AI content drafting engine that localizes public campaigns across 22 official regional Indian languages and generates dynamic, responsive previews across device layouts.
- Developed an offline content compliance auditor that evaluates campaign drafts for shouting patterns, duplicate phrasing, character counts, and sensitive keywords, improving message quality before bulk broadcasts.

CERTIFICATIONS

- Google Skills Profile – Diamond League (21,635 points) [\[View Profile\]](#)
- Infosys Springboard – Pragati: Path to Future (Cohort 6)
- Infosys Springboard – Prompt Engineering

ACHIEVEMENTS

- Rank 1 (Women Developer) & Overall Rank 30 / 26,090+** (Virtual PromptWars 2026): Organized by **Google for Developers & Hack2Skills**; developed VoteWise AI with a 96.98% AI-verified score in code quality, security, efficiency, Google services, and accessibility.
- Gateway Classes Academic Excellence Cup:** Awarded for achieving a 9.02 YGPA and outstanding performance during the first year of B.Tech.
